

Connected Data Company – Data & Analytics Platform for a SaaS product

UK based Debt Prevention SaaS product company wanted an efficient and secure cloud solutions for Debt Analytics product.

Large scale of PII data ingestion and Analytics

Challenges

- Secure environment to hold customer data.
- Isolation of customer data
- Faster onboarding of new customers
- High performance analytics on the platform

Solution

- Cloud environment design and setup: Stanra worked with customer business teams to design and set up and host the product in a SaaS model. Analysis of the computing needs based on data volume/workload and optimal provisioning of resources for each customer
- Automation: Automation of new customer onboarding
- DevOps: Automated Environment Provisioning, code build and deployment on Azure, with ongoing development and maintenance of various customer environments
- Analytics and reliability engineering: High performance analytics and fine tuning using Yellowfin Data Prep and Yellowfin dashboards
- Security: Raw data received for ETL is transferred from Customer systems using Secure transfers

Benefits

- Continuous improvement on onboarding of new customers through automation
- Secure, stable and efficient environment provided
- Complete design, build and maintenance of the cloud environment for a BFSI product company holding sensitive customer data for analytics
- Continuous improvement through automation, efficient use of resource and cost optimization
- Reducing customer Onboarding time through automation
