

Online Water Ordering Platform for an India based startup

An app based platform for streamlining your water and beverages delivery at your doorstep reliably.

AtServe

A user friendly app which makes it easy to order quality branded bottled water at your doorstep.

Challenges

- A scalable Backend Architecture open for adding multiple features
- An easy to use Mobile UI for bringing user traction

Solution

Stanra as part of our solution developed the Product:

- Designed easy to use mobile UI & UX to achieve easy ordering
- Designed architecture for the API's.
- Implemented backend API's using Java 8 and Spring Boot
- Built a Native Mobile App for Android and iOS
- Implemented the complex algorithms for ordering, tracking and delivery based upon the location

The app right now is launched in India and is operational in Delhi NCR

Technology Used: MySQL, Android Java SDK, iOS Swift, Java 8, Spring Boot, AWS EKS, Docker, Kubernetes, Google Maps Location Services

Innovation

- Easy to Use Mobile UI/UX
- Scalable Backend API's

Benefits

A user friendly app which makes it easy to order quality branded bottled water at your doorstep.

Result Highlights

Scalable Backend APIs

Easy to Use UI/UX

Friendly App for Doorstep Delivery
